Found 8 (121)

Task 4:

Compared to the baseline model in Task 1, the fine-tuned model in Task 3 performed better for my drawing style. In Task 1, I was able to recognize most digits, but some, such as 5 and 8, were harder and required more attempts. After fine-tuning, I was able to complete all digits 0-9 more quickly, indicating that the model became more consistent and better adapted to my personal gestures.
